

# Transforming Residents' Lives

Ally's Resident Monitoring system helps care homes to improve residents' well-being and deliver better care outcomes.

Free up carers' time to deliver more person-centred care and transform residents' lives

*\*NHSE, ICB and Customer research data, 2023*

63%

fewer falls\*

56%

fewer hospital stays\*

50%

more sleep for residents\*

30%

more care time\*

## COMPLETING THE CARE PICTURE

Ally uses AI combined with sound and motion sensors to detect residents' needs when they are alone in their rooms, alerting carers to signs of pain, discomfort, distress, movement, or calls for help. It also tracks valuable insights such as sleep patterns, coughing, agitation, and night-time routines.

These alerts and insights help care homes prevent and detect falls, identify chest infections and UTIs earlier, promote better sleep and privacy, and optimise care plans.

## EFFORTLESS IMPLEMENTATION

Just one device per resident room, plug in, and connect to WiFi in minutes. The Android app keeps you updated. Switch it on at bedtime and get alerts when residents need help.

## WITH OUR SOLUTION, YOU CAN:

- Improve resident safety
- Give residents a better night's sleep
- Give staff more time to care
- Deliver better personal care with unique insights

## ROI BEYOND COMPARE

Reclaim 30% of staff time, equivalent to £13,000/year/staff member, with a 7x ROI. Plus, lessen the pressure on staff with less night checks, improve staff satisfaction, reduce vacancy rates, and be the go-to care home for new enquiries leading to higher admissions.

Integrated with Digital Social Care  
Records providers including:

We proudly work with:

## Ally completes your care record with unobserved care needs.

Traditional care checks miss 50-80% of resident activity, leading to incomplete knowledge of care needs. Ally captures what you don't see and when combined with your care record helps you transform the effectiveness of care delivered. It also helps to:

### REDUCE STAFFING PRESSURES

- ⊗ **Without Ally:** 2-hourly checks can disturb residents and create work for carers.
- ✔ **With Ally:** Give staff back 30% of time over a night shift by no longer checking on peacefully sleeping residents.

### SAFER & MORE RESPONSIVE

- ⊗ **Without Ally:** Night-time incidents like falls often happen in between scheduled checks.
- ✔ **With Ally:** Remote monitoring makes staff instantly aware of when assistance is needed. On average falls are reduced by 63% and hospital admissions by 56%.

### MORE EFFECTIVE & CARING

- ⊗ **Without Ally:** 1 in 5 check-ins wake up peacefully sleeping residents.
- ✔ **With Ally:** With fewer interruptions, residents enjoy 50% more time asleep leading to less medication required, more engagement in daytime activities and improved well-being.

Ally is the most extensive evidence-based Resident Monitoring System in the UK. We have significant data that underpins the effectiveness of our system, and our customers' experiences reinforces our impact.

*"By using Ally, we've made massive improvements to our overall falls prevention strategies because we're alerted much earlier to changes in a resident's behaviour like coughing or calling out but also we've been able to enhance our patient outcomes by using the reports and insights to deliver care when it's needed most"*

Jay Trondillo, Regional Director,  
Maria Mallaband Care Group

*"With Ally, we've been able to optimise the care plan for every resident, leading to transformative improvements in their lives—something we couldn't achieve with care plan data alone."*

Julie Burton, Head of Operations,  
Twinglobe Care Ltd
