Care Vision AI Newsletter

Invisible Technology. Visible Human Care.

Your November Update!

Hi,

Welcome to your November Care Vision AI newsletter!

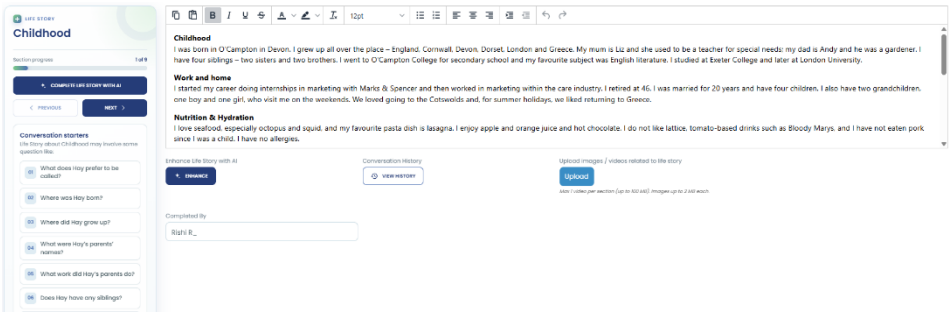

This month, we're giving you an exclusive first look at two exciting upcoming releases, AI Life Story and MI Voice, both designed to make care more personal, connected and effortless for your team

We're also sharing how you can get your hands on our FREE AI Anomaly Detector and celebrating the launch of our brand-new TikTok channel!

And that's not all! We're taking a look back at the Scottish Care National Care Home Conference & Exhibition, where our CEO, Rishi Jawaheer, joined care leaders and industry experts to support Scottish Care and explore the future of social care.

Let's get into what's new at Care Vision AI!

Ai Life Story - Getting To Know The Person Behind The Care

We're excited to introduce AI Life Story, an upcoming addition to Care Vision AI, designed to make capturing someone's personal history easier, more natural and more meaningful.

No interruptions. No distractions. Just genuine conversations and human connection.

Rather than spending time filling in forms or typing up information, care teams will be able to have a natural conversation with a service user, simply speaking from the heart, while AI works quietly in the background to transcribe the conversation and help turn it into a personalised Life Story. From childhood memories and family relationships to hobbies, interests and important life experiences, AI Life Story will help capture the moments that make each person unique.

Because getting to know someone shouldn't mean looking at a screen. It should mean listening to their story.

MI Voice - A New Way to Capture care

We're excited to share a first look at mI Voice, a new feature currently being developed in collaboration with **LDC Care**, as part of our upcoming Person App.

At Care Vision AI, we believe that person-centered care starts with listening to the people receiving it. That's why we're working closely with LDC Care to develop mI Voice, helping service users express their own choices, preferences and needs, ensuring their views and experiences remain at the heart of their care.

While still in development, mI Voice aims to encourage greater independence, involvement and meaningful participation in everyday care decisions.

Because care shouldn't just be about what we do for someone, but about listening to what matters to them.

Our FREE AI Anomaly Detector Is Here to Stay (For a Little Longer!)

If you caught our last newsletter, you'll have seen us raving about our brand-new **AI Anomaly Detector**, which we were giving away for FREE at the Care Show!

Well, you all loved it so much that we've decided to keep it around for a little longer!

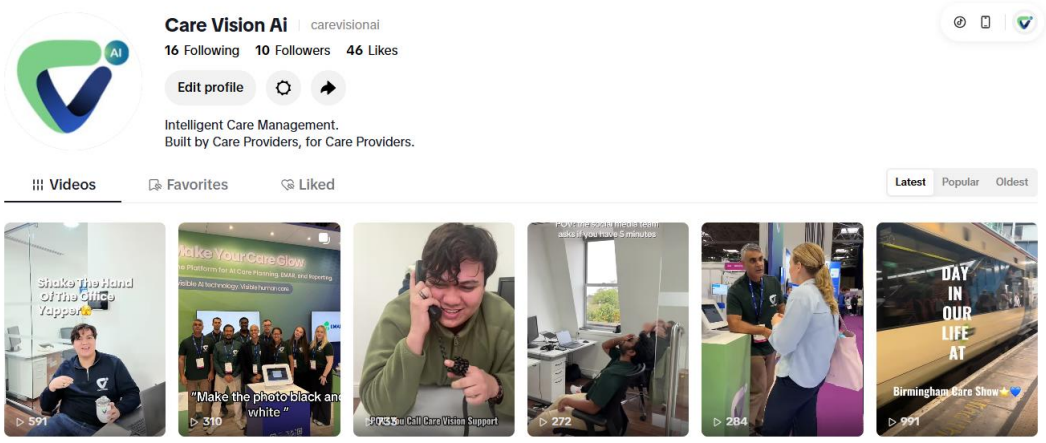

Our AI Anomaly Detector allows you to upload Care Plans and Risk Assessments from your existing digital care system and identify potential contradictions, missing information and unusual details that might need a closer look.

Curious to see what it might uncover in your current care plans? 😉

Simply email bo@care-vision.co.uk to get FREE access and see what surprises might be hiding in your records!

And don't keep it to yourself! Feel free to share this with your friends and colleagues across the care sector. **Whether you're a Care Vision AI client or not, everyone is welcome to give it a try!**

We're Officially On Tiktok!

We're officially on TikTok, and we'd love for you to join us on this exciting new journey! From behind-the-scenes moments in the office and joining us at events, to sneak peeks at our latest features and everything happening at Care Vision AI, we're bringing you along for the ride!

Give us a follow and come see a whole new side of Care Vision AI! 💚 💙

The Home that Care Creates - Care Home Conference 2026

Our CEO, Rishi Jawaheer, attended the Scottish Care National Care Home Conference & Exhibition in Glasgow to show our continued support for Scottish Care and the fantastic work they do across the sector.

The event brought together care leaders and industry experts to discuss the future of social care, with valuable insights into AI, innovation, workforce challenges and sustainability.

A key takeaway was the importance of collaboration and ensuring innovation continues to reflect the real needs of care providers, while keeping people at the heart of care.
